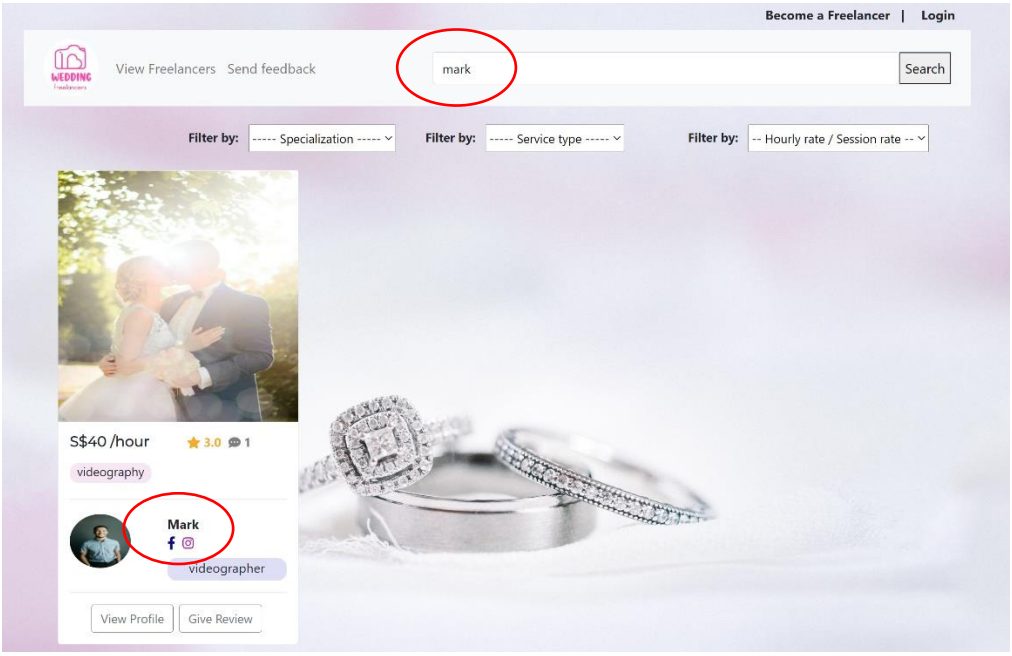
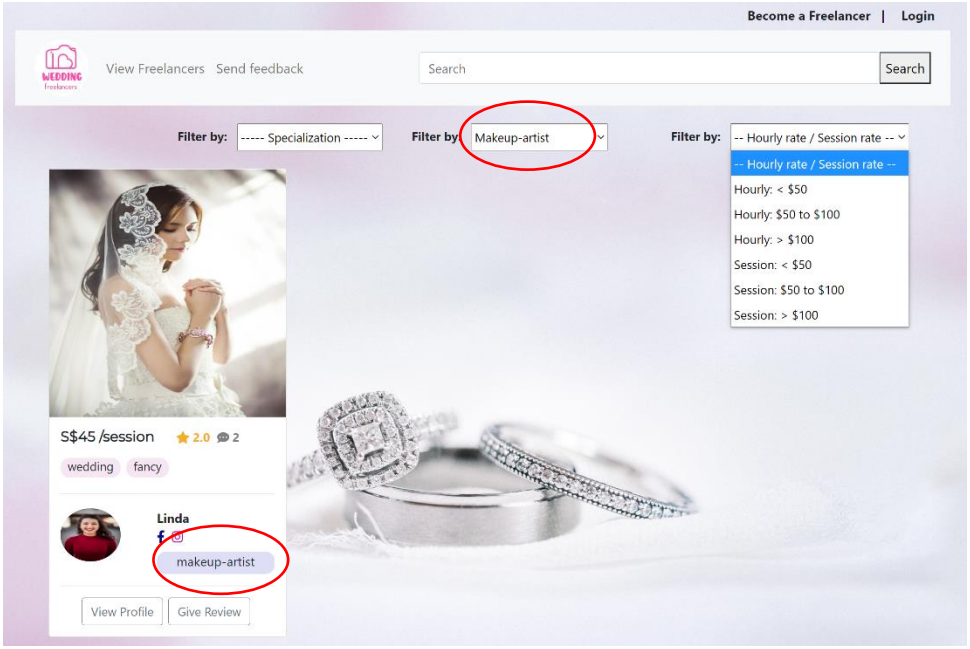
Testing

1. Search



Test steps	Expected result
Type the key word in the search input	the system will find match those key words in freelancer profile (name, bio, showcase, portfolio, description, reviews) and display the list accordingly.

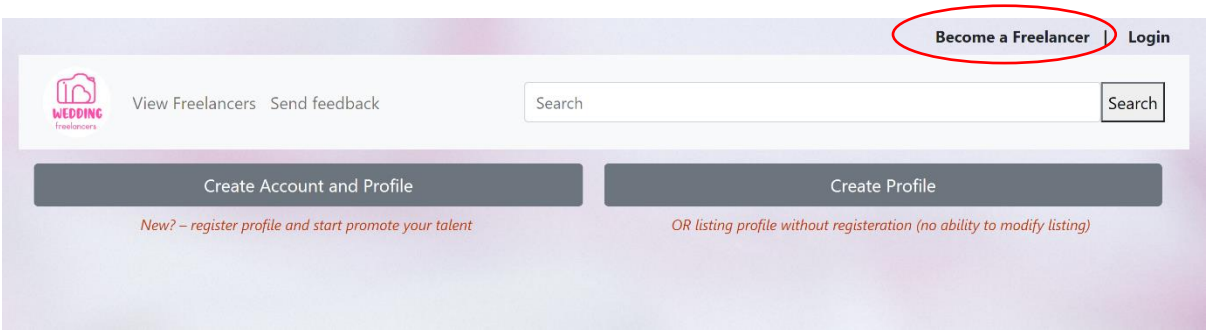
2. Filter



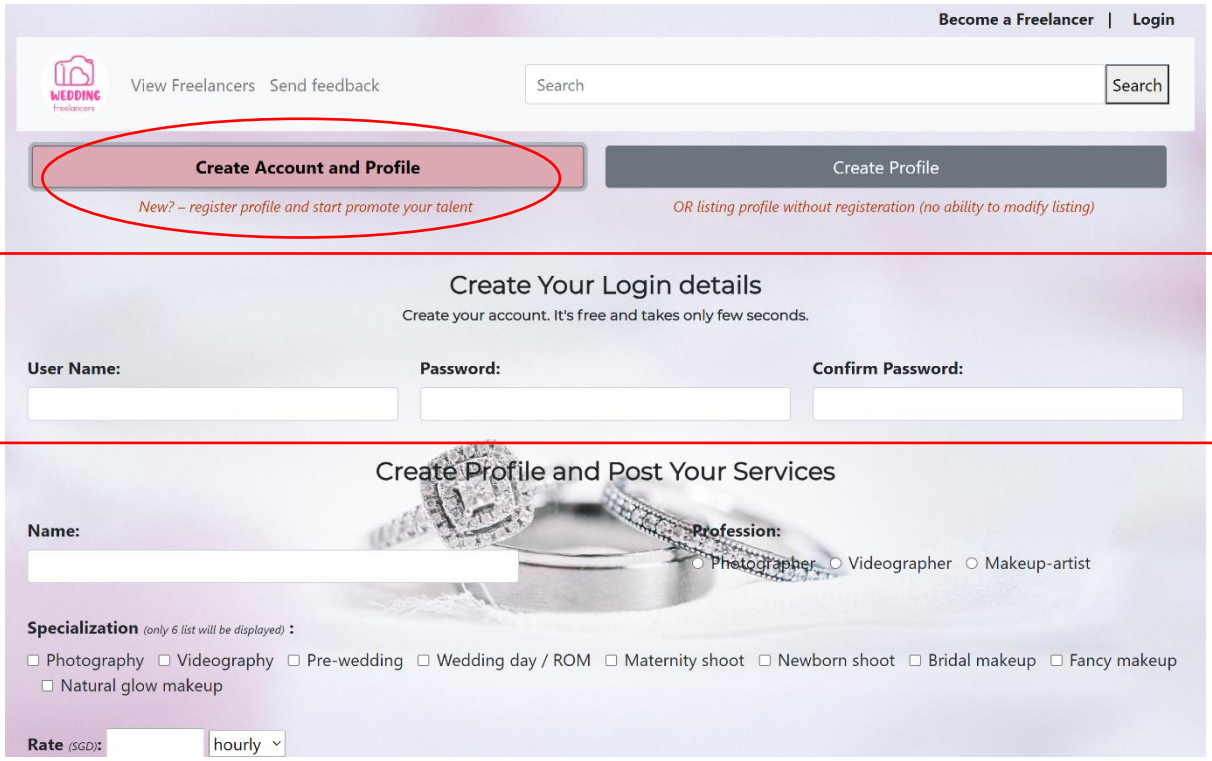
Test steps	Expected result

Choose from the drop-down list (choice of selection by service type, the specialization and filter by rate range such as lesser than $50, between $50-100 or more than $100)	The rendering will display the list according to the filter.

3. Account registration and profile creation



Next



Test steps	Expected result
Select "become a Freelance" to register the profile	There will be 2 options given: **Create account and profile** – to create account (user credential) and profile listing in the same form. **Create profile** - just to create listing with no ability to modify and update. ** There will be no user name creation filed in **Create profile** tab*

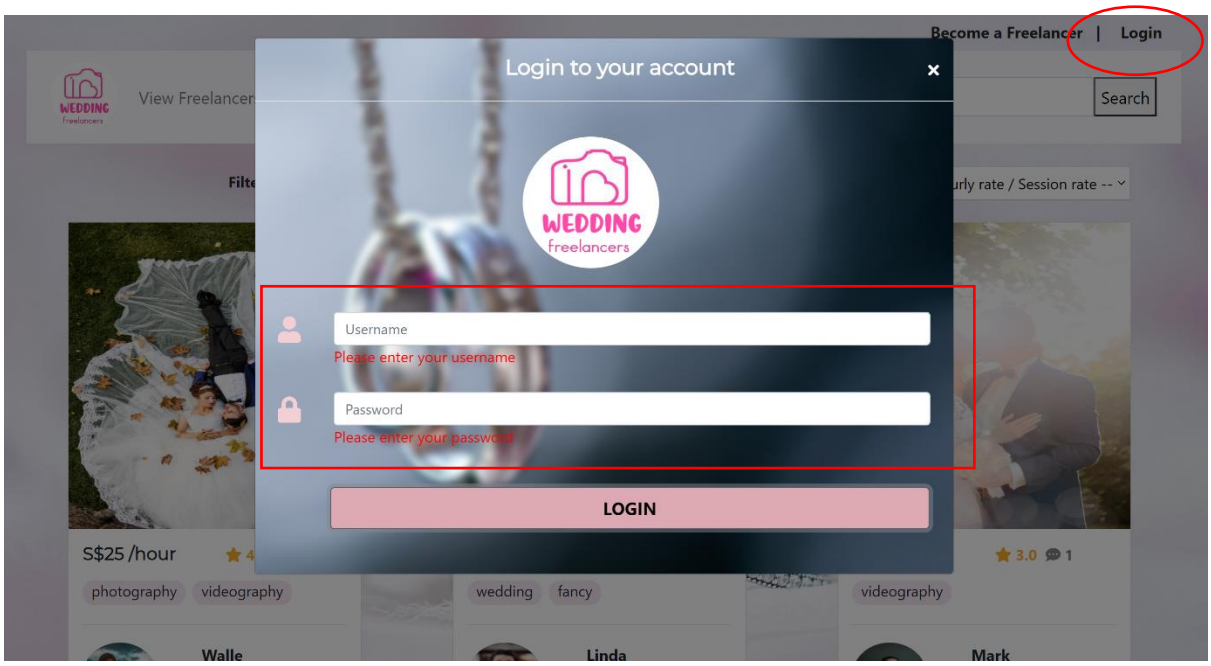
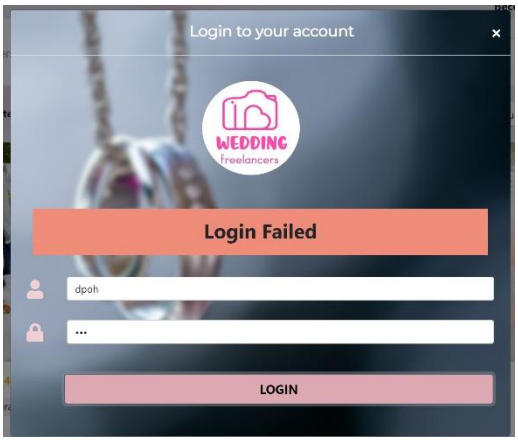
Test steps	Expected result
fields to be filled in the registration form react validation is setup	Beside the **validation on mandatory fields** that are shown above, there are also additional validation as below: <u>For user account creation</u> • **Password** and **confirm password**: must be matched • For security reason, perform password encryption before storing into DB. So, when retrieve password, using the function to encrypted the given password and compare with the encrypted password in DB (bcrypt.compare) <u>For profile creation</u> • **Specialization** - If the user chooses more than 6 choices, system will not process unless user reduce the choices to max 6. • **Social media and website** - Will check for the correct website address format (like http:) • **Profile image** – if user do not provide any image, system will take the default profile image set in DB. <u>After click registered and create button</u> • The system will extract/remove the login credential to store them separately (in separate DB collection) • Only the profile details section to display on the listing page • After submit the registration request, the page will route to listing page • User still require to login if they want to manage their profile

4. Login

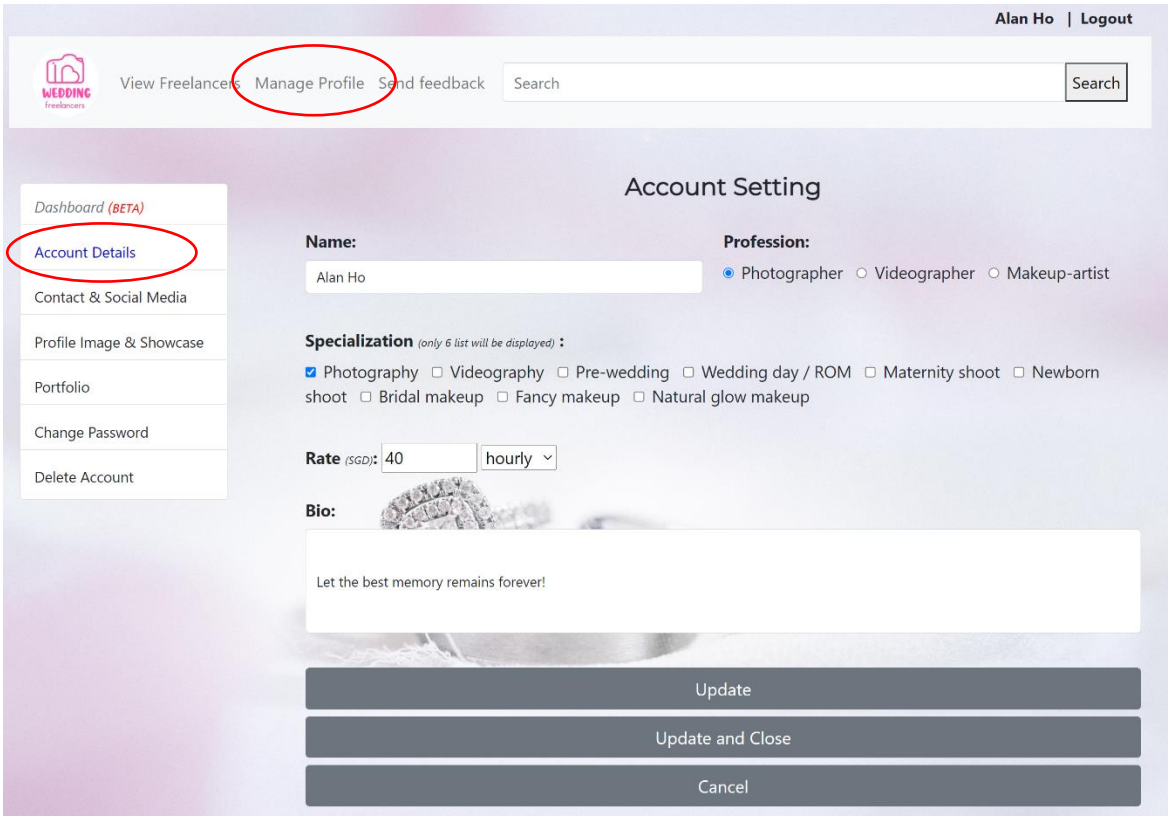


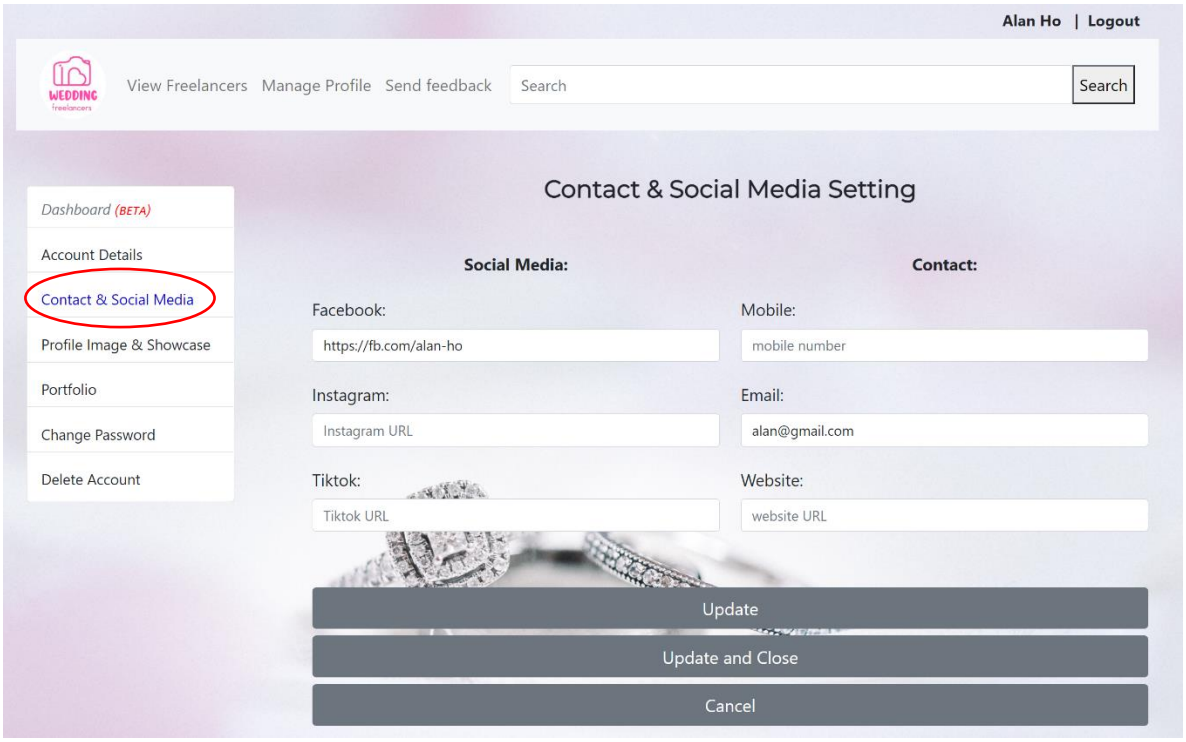


Test steps	Expected result
User to ender the user ID and password in the login page react validation is setup	If the username and password is correct, the page will route to listing page and the "**manage profile" page tab will appear.** Above are the **validation on mandatory fields**, and the error message displayed when user enter incorrect login details that doesn't match.

5. Manage profile

Account setting





Test steps	Expected result
After login, the “Manage Profile” tap will appear User is able to update, change the existing info on their profile.	The existing information on the profile will auto-populated. User just change any fields of desired. Validation stays the same as the registration or those mandatory fields.
